Abstract (en)

[origin: EP1967121A1] The method involves filling a ground water amount and increasing a rotational speed of a circulating pump (5) from a starting rotational speed to a target rotational speed. The rotational speed of the circulating pump is increased to a refueling rotational speed based on the starting rotational speed after the intake of the ground water amount such that an unstable pump run occurs. The water amount is supplied to a rinsing machine i.e. dishwasher (1), depending on the refueling rotational speed or a mathematical relationship between the target rotational speed and refueling rotational speed.
