Abstract (en)
[origin: EP1967341A2] Mold comprises a tensioning structure with tensioning elements for twisting sections of a mold core (K1) separated by a core holder batten (KH1) and lying opposite each other in the transverse direction against the core holder battens. Preferred Features: The tensioning elements have a screw thread and are spaced from each other in the longitudinal direction. A damping material is inserted between fixing elements and openings in the core holder batten.
