Abstract (en)

[origin: EP1967397A1] The arrangement has at least two control element-positive temperature coefficient element groups connected together via a first bus bar (7) connected to a pole of a power supply by at least one conductor (8,10). The conductor runs in parallel with a separate conductor connected directly or via a second bus bar separate from the first bus bar to at least one further control element-positive temperature coefficient element group.
