Abstract (en)
[origin: EP1967464A1] The pouch (1) has two rectangular layers (2, 3) assembled at their periphery (4) by welding and delimiting an internal volume (8) for receiving cosmetic product. A longitudinal direction of the pouch is parallel to a direction of unwinding of rollers of a machine e.g. binding machine. A linear insert (7) is placed, parallel to the longitudinal direction, in an axis of the volume. The insert extends on entire length of the volume. The layers and the insert are made of polyethylene.
