Abstract (en)

[origin: EP1967477A1] The emergency device (10) has emergency control area (12), which is to open the interior of an elevator car out by an emergency key (13), in which a key switch (14) is arranged in the emergency control area. A key mechanism (15) is fixed in the elevator car, which has a mechanical profile inset with key slot and is so arranged, that by putting and rotating the emergency key into the key slot the emergency control area is unlocked mechanically.
