Abstract (en)
[origin: EP1967797A1] The radiator (1) has a parallelepiped casing (2) comprising a front wall (4) and a flap, where the valve and the flap form an air outlet. A heating element (3) heats the air from an air inlet (12) such that the heated air is evacuated across the air outlet. The flap extends in a plane parallel to a plane in which the front wall extends. The flap is drifted in front with respect to the front wall for conveying air parallel to the plane of front wall. A round wall (56) is placed in support against an internal face (46) of the flap.
