Abstract (en)
[origin: DE102005062458A1] Protective cap (1) for handtool with rotational tool, with axial side to cover the rotational tool in areas. The axial side (3) should have side areas (4) lying next to each other offset axially inter-connected as a piece. Handtool with such a protective cap. The sides are identical in surface area and/or geometry. They have radially running bumping surfaces with bump zones embodied as raised steps (6), particularly reinforcement steps. Axial side lies next to a collar with covering surface (16) which runs with the same coaxial distance to the turning axis of the rotational tool.
