Abstract (en)
[origin: WO2007065392A2] The invention relates to a method and a device for blow-moulding containers. Preforms consisting of a thermoplastic material are heated in the region of a heating section and transferred to a blow device. Said blow device is provided with at least one blow station for shaping the preforms into containers. The preforms are held by a carrier element, along at least part of the transport path thereof. An abutment element for fixing the position of the preform in relation to the carrier element according to a geometry of the preform is positioned in the direction of a longitudinal axis of the carrier element.
