Abstract (en)
[origin: WO2007073028A1] Disclosed is a marine panel using embossed metal boards, including a pair of metal boards, each having curved portions on both sides, and a filling material inserted into the space between the pair of metal boards. Therefore, the inventive marine panel is thin and lightweight, has excellent strength or endurance, and exhibits a superior sound insulating effect with high esthetical value. Moreover, since the marine panel can withstand high temperatures during fire and is not easily ignited, it can protect lives from the dangers of fire, and is easy to install in a convenient manner.
