Abstract (en)  
[origin: US2007124890A1] A mobile surface maintenance machine includes a mobile body configured to travel over a surface, a motorized tool, a communicator, a memory, and a controller. The motorized tool is supported by the mobile body and configured to engage the surface. The communicator is configured to communicate over a network. The memory contains settings for the machine. The controller is configured to modify the settings of the machine in response to setting information received by the communicator over the network and to control operations of the machine based on the settings.
