Abstract (en)

[origin: EP1970317A1] Pallet for barrels that comprises a flat upper loading platform (2) provided with a plurality of corner protuberances (9), disposed in correspondence with the vertices of each loading platform (2), and a plurality of intermediate protuberances (12) and major protuberances (14) in correspondence with intermediate sections of its edges, said protuberances (12, 14) being operationally spaced in correspondence with barrel (8) size, in such a manner that said protuberances (9, 12, 14) provide a means to retain the barrels (8) against the exterior of the pallet, so that said barrels (8) are disposed tangentially to each other when positioned on said loading platform (2) between the protuberances (9, 12, 14).
