Abstract (en)

[origin: EP1970339A2] The folding device has a longitudinal folding unit (10), which has a folding hopper (12). The substrate is sliced into partial webs through slitting by a longitudinal slitting unit assigned to the folding hopper or by a longitudinal slitting unit assigned to a substrate of a line (13). The partial webs deserted the folding hopper as line (14). The line is proratable downwards to the folding hopper and upwards to the transversal folding unit (11) in three partial subsections (18,19,20), where one of the partial subsection is assigned to a stapler (21).
