Abstract (en)
[origin: EP1970507A2] The lock has a holding unit (12) spacially arranged from a slider (10) and attached to a spring bolt (2), where the holding unit holds the spring bolt in a bolt condition. The slider, which is spring-loaded, moves independently from a position to another position. The holding unit is loosened into a rotary position in the bolt condition. The slider is held in the latter position, and the spring bolt arrives into another condition. The spring bolt exhibits a nose-like projection (14) that is held in the holding unit in the latter position of the spring bolt.
