Abstract (en)
The watch has a casing element including casing rings (1, 2) permitting an electronic or mechanical movement (5) to be maintained in a middle (6). A frame (9) hides the movement partially, and is visible through a glass (8). The rings are superposed and compressed between a disc face (60) of the middle and a rib (71) that is connected to a back (7). An annular elastic seal (3) compresses the disc face between the rings, and another annular elastic seal (4) avoids infiltration of water between the back and the middle. An independent claim is also included for a method of casing a movement of a watch in a middle.

Abstract (fr)
Montre comportant deux cercles d'emboîtement superposés et comprimés entre une portion (60) de la carrure (6) et une portion (71) liée au fond amovible. Le mouvement est maintenu entre les deux cercles d'emboîtement. Un joint élastique annulaire (3) permet de compenser d'éventuelles différences de hauteur. Avantages: emboîtement rapide et robuste, sans brides ni vis.
