Abstract (en)

[origin: DE102006001866A1] The method involves conveying and delivering of fluid by a conveyor line (10) from the tank (2). The volume of the delivered fluid is measured. The conveyor line is blocked for stopping the delivery by a tank shut-off device (13) e.g. base valve. The residual fluid is conveyed and delivered from the conveyor line to the tank facing side of the tank shut-off device. The volume of the residual conveyed fluid is measured. An independent claim is included for the device for delivering fluid from tank.
