Abstract (en)
[origin: WO2007075613A2] A candle assembly includes a base having a light permissive sidewall extending therefrom that defines an interior space. A light source includes power circuitry that is disposed within the interior space. A light permissive sheath is disposed around the sidewall and the sheath is radially spaced from the sidewall. A top end of the sidewall is adapted to hold a candle refill. A height of at least one of the sidewall and the sheath is adapted to extend to at least a top portion of the candle refill to allow the transmission of light from the light source to obstruct a view of the body of the candle refill.
