Abstract (en)
[origin: WO2007079716A1] The invention relates to an electrical switch (1) for an electrical device, especially for electric tools, such as drills, grinders, saws, planes, angle grinders, or similar. Said electrical switch (1) comprises an actuating element (13) and a contact system, upon which the actuating element acts in a switching manner. The contact system and the actuating element (13) are configured as an autonomously operable switch unit (14) similar to a module. Said switch unit (14) can be disposed inside a mounting frame (15) which is used for fastening purposes in the electrical device. To this avail, the mounting frame (15) is provided with a receptacle for the switch unit (14), the size of said receptacle approximately matching the size of the switch unit (14).
