Abstract (en)

[origin: WO2007073468A1] An interactive media guidance application implemented on a user equipment device may allow a user to create a group of user equipment devices that may be located in different homes or home networks. The interactive media guidance application may allow the user to add user equipment devices located in the user's home. The interactive media guidance application may also allow the user to invite user equipment devices located in other homes or home networks to join the group or accept requests from user equipment devices located in other homes or home networks to join the group. The interactive media guidance applications implemented on the user equipment devices in the group may allow users to select content to be stored. The content may be shared with the user equipment devices in the group.
