Abstract (en)

[origin: DE202007009029U1] The device has a gripping element (16) with a laminar base (12), which is transferred from a laminar arrangement into a spatial form for absorbing excrement such as dog dirt. A shell (14) is provided for the insertion of the gripping element, and the element is locked in an odor-tight manner after the absorption of excrements. A bed pane (17) is provided, which is formed from another laminar base. The latter laminar base is provided for the formation of an additional gripping element.
