Abstract (en)

[origin: EP1972212A1] The chamfer (10) has two side walls (13, 14) spaced apart from each other and parallel to each other, and a chamfer body (11) with a rear wall (12). The chamfer body forming a bottom wall (15) forms a receiving space (16) for a rod-shaped product. The space is divided into individual shafts (18) by shaft walls (17) which run parallel to the side walls. The shafts walls are separately mounted to the chamfer body. A receiving unit (19) and/or fastening unit for receiving and/or fastening the shaft walls to the chamfer body are formed in a region of the rear wall of the chamfer body.
