Abstract (en

A bicycle multi-gear cassette (80) mountable to a wheel hub that generally includes a truncated conical shell (12) and a plurality of toothed sprockets (14) having different numbers of teeth (48). The shell (12) includes a plurality of coaxial annular cylinders (16) of variable diameter extending along an axis (18) of the shell (12) and a plurality of coaxial annular discs (20) of variable diameter extending radially of the axis (18). The cylinders (16) and discs (20) are alternatingly arranged in a stepped sequence. The toothed sprockets (14) are disposed on the shell (12) and extend radially of the shell axis (18). At least one of the toothed sprockets (88) includes a recess (84) on a side (86) facing an adjacent toothed sprocket (88) having a smaller number of teeth. The recess includes a first region (90) having a first depth and a second region (92) having a second depth. The first depth (90) is greater than the second depth (92). The shell and the plurality of toothed sprockets embody a single piece.
