Abstract (en)

[origin: EP1972560A1] The method involves closing the packaging enclosing the gathered region of the packaging enclosing the product with a clip by folding or bunching the section of packaging material about the product so that it encloses the product with one side exposed, gathering the section of packaging material above the product on the exposed side to form a neck and closing the neck to apply a clip. The neck of the packaging material is fixed when closed and the clip is continuously fed as a continuous clip tape. An independent claim is also included for an arrangement for packaging a product in a section of packaging material.
