Abstract (en)
[origin: EP1972727A1] A waterless urinal has a cylindrical insert (10) with outlet grooves on the outside to drain liquid into a collecting space from where a siphon device drains into lateral outlets protected by a cylindrical membrane (13). The whole fitting is held centrally in the outlet duct (33) by two flexible flanges to provide a plug in fitting. No water barrier is required. The initial drainage grooves prevent ingress of items.
