Abstract (en)
[origin: DE202007004494U1] The device has a foundation plate (12) and a covering plate (14), which is arranged parallel to the plate (12) and rotates relative to the plate (12) at a rotating axis perpendicular to a plane of the plate (14). A building is arranged on the plate (14), and a controllable drive unit is provided for the rotating movement of the plate (14). Supporting rollers (20) are arranged on the plate (12) in a preset radial modular dimension in a linear-radial direction, which proceed through the rotating axis of the plate (14). The plate (14) is directly supported on the rollers.
