Abstract (en)

[origin: EP1972772A2] The head has two gas exchange outlet ports (2, 2') arranged in an outlet port of the head, and gas exchange inlet ports (4, 4') arranged at an inlet side (3) of the head. The inlet ports are arranged along a cylinder head longitudinal axis (LA), and an ignition and/or fuel injecting device is arranged between the ports (2, 2', 4, 4'). A coolant channel (5) extends between the outlet ports in direction of the device. The channel extends up to the channel height and is bent from the inlet side between the outlet ports based on coolant cylinder ports (6, 6').
