Abstract (en)

[origin: EP1972855A1] An oven (1) with a cooking chamber (2), comprising an air cooled door (4), with a plurality of plates, eg. window panes, wherein said door (4) comprises a first (51) and second (52) gap located between the window panes, which are positioned on the outer and inner side of door (4). Air moving means (5) draw a first air flow, rising through said second gap (52) through a suction duct (6), and blow it to the outside through an expulsion duct (7). A second air flow rises through said first gap (51), unable to pass through said suction duct (6), and encounters said first air flow exiting from the expulsion duct (7), immediately after having left the first gap (51).
