Abstract (en)

The invention relates to a playback system (20) for playing back an audio piece at a playback site and for providing additional information related to the audio piece. The proposed playback system (20) comprises: - an acquisition component (40) for acquiring audio data (10) of the audio piece, - a means (40, 55) for acquiring the additional information related to the audio piece, - an encoding component (60), which is located at the playback site of the audio piece and which is configured to combine the audio data and the additional information and to generate an audio signal containing the audio piece and the additional information, and - a playback component (80), which is connected to the encoding component (60) and which is configured to generate an acoustic signal (75) from the audio data. The invention further relates to a method for playing back an audio piece at a playback site and for providing additional information related to the audio piece.
