Abstract (en)  
[origin: US2009036013A1] The invention relates to a flame-resistant closure comprising at least one closing part having at least one two-dimensional backing fabric (14) from warp threads (10) and weft threads (12) and having functional threads (16) on the right side of the backing fabric (14) that at least partially extend through the backing fabric (14) and that form the closing elements (18). The backing fabric (14) is of the non-flame-resistant type and at least some sections of its reverse side comprise a substrate layer (32) with a hardly inflammable medium and/or with an active extinguishing medium. The closure according to the invention meets even high demands on low inflammability.
