Abstract (en)  
[origin: WO2007082716A1] The present invention relates to a treatment device which can be connected to a radiation source and which can be used in particular in lithotripsy, wherein a shockwave source producing shockwaves, which can be used to emit shockwaves to an object to be treated, and a radiation localization device integrated into the shockwave source are provided. In order to provide such a treatment device, which enables, irrespective of the user, good image quality and good bundling of the shockwaves using a radiation source in as simple a manner as possible, the radiation localization device has a radiation receiving unit designed as a solid-state detector.
