Abstract (en)

[origin: WO2007082664A1] The present invention relates to an apparatus for practising golf strokes, with an essentially planar supporting surface (10) for at least one person, which surface provides at least one tee for a golf ball, wherein the position of the supporting surface (10) with respect to the underlying surface (9) can be adjusted, which apparatus is characterized by at least two elements (1, 2; 3, 4; 5, 6, 7, 8, 9, 10) which are mounted rotatably together or on each other, are of wedge-shaped design and are connected to rotary bearings, with a bearing surface (L1; L2; L3; L4) and functional surface (F1, F2; F3, F4; F5, F8) which each converge at an acute angle (a1, a2, a3, a4, a5, a6, a7, a8) and the position of which with respect to each other can be adjusted by relative rotation, wherein the bearing surfaces (L1; L2; L3; L4) of the wedge-shaped elements (1, 2; 3, 4; 5, 6, 7, 8) face each other, the functional surfaces (F1, F2; F3, F4; F5, F8) of the wedge-shaped elements (1, 2; 3, 4; 5, 6, 7, 8) face away from one another and, by relative rotation of the wedge-shaped elements (1, 2; 3, 4; 5, 6, 7, 8) in relation to one another, the position of the functional surfaces (F1, F2; F3, F4; F5, F8) of the wedge-shaped elements (1, 2; 3, 4; 5, 6, 7, 8) with respect to one another can be adjusted, wherein one of the functional surfaces is preferably formed rotatably at or on the underlying surface (base, 9) and the other functional surface forms the supporting surface (10), or a support is designed to provide the supporting surface (10).
