Abstract (en)

[origin: WO2007082697A1] The invention relates to a group of reagent carriers (4) that is combined to form a composite (3), each one of said carriers having at least one test region (8) situated in a shallow, basin-type depression. According to the invention, the reagent carriers (4) in the composite (3) are held together exclusively by interconnected protective covers (2) for the test regions (8).
