Abstract (en)  
[origin: WO2007082694A1] The invention relates to a process for sintering metal-containing materials such as iron ores or manganese ores on a sintering machine, in which the sintering offgas from the third section is transported to the sintering offgas from the first section and is combined with this in a mixing region to form a mixed gas, wherein the transport distance of the sintering offgas from the third section to the mixing region is greater than the transport distance of the sintering offgas from the first section to the mixing region, and also an apparatus for carrying out the process.
