Abstract (en)
[origin: DE102006002838B3] The device has drill and jet rods (1) producing a bore hole, and a jet spray column provided in a region of the bore hole. A measuring device (14) measures diameter of the spray column and is partially integrated in the drill and jet rods. The measuring device has a longitudinally stiffened sensor unit moved between a position retracted at the drill and jet rods and a position extended into the drill and jet rods. The sensor unit is made of a fiber-reinforced material e.g. carbon fiber reinforced plastic or glass fiber reinforced plastic bar, in sections. An independent claim is also included for a method for producing and measuring a jet spray column.
