Abstract (en)
[origin: WO2007083950A1] The present invention relates to an electronic cooker, and a method for a game using the same. According to the method for a game using the electronic cooker, when a cooking start command is input through a keypad, a microprocessor causes games, which have a game time equal to a cooking time among games stored in a memory, to be displayed on a display unit, and allows a user to select one of the games. The microprocessor performs control such that the cooking operation and the game can be simultaneously executed during the cooking time. When the cooking time elapses, the game is ended. Therefore, the method for a game using the electronic cooker has an advantage in that the user can play a game during a waiting time for cooking, thereby improving user's satisfaction in the cooking process.
