Abstract (en)
[origin: EP1811483A1] The seal has a fastening body and an insertion part (15) e.g. metal bolt, which is connected with a connecting link (4). The insertion part is inserted into a fastening mechanism (18) of the fastening body in an insertion direction and held by the fastening mechanism against the insertion direction. The connecting link (4) and a connecting link (5) are connected with the fastening body or a retainer. The connecting link (5) is provided with a hole and the insertion part penetrates the hole when closing the seal. The fastening body and the fastening seal are made of plastic. An independent claim is also included for a method for manufacturing the fastening seal.
