Abstract (en)
[origin: WO2007083052A1] The invention concerns an electric switch (1) comprising an electric switch contactor (2, 7) , shifting from a rest position to a switching position and vice versa by linear translation, and maintained on a support (12), and a manual activator (9) for controlling the switch (2) actuating the contactor (7). Means (16) are provided for compensating a dimensional clearance existing between an upper surface (8) of the contactor (7) in the position for switching the electric switch (2) in engagement with the manual activator (9) and an upper surface (17) of the support (13) on which the electric switch (2) is mounted.
