Abstract (en)

[origin: EP1974631A1] The brace (7) has a carcass (2) having a short side wall (3) and a long side wall (4), and with a front (6) which runs at an obtuse angle relative to the short side wall when the cabinet is closed. The brace has a pair of guide rails (10, 11) which telescope in opposite directions. The guide rail lies on the carcass. The other guide rail (11) supports the front and has an object holder (13). A pivot bearing is provided to hold the guide rail (10) so that it is pivotable around a vertical pivot axis (9) on the short side wall. A connection plane runs at an obtuse angle to the other guide rail.
