Abstract (en)  
[origin: EP1974878A1] A cutting roller (22) and/or a mating roller (24) have an inner core and an outer sleeve around the inner core. The outer sleeve has a clearance from the inner core, on which there is a thrust bearing to support the outer sleeve and to be so arranged that forces exerted on each other by the cutting roller and the mating roller can be diverted in a defined manner via the thrust bearing.
