Abstract (en)
Label manufacturing apparatus 55 forms rolls of label web at 82 from stock material 56, which consists of label material carried by a liner or backing paper. Labels are printed on the web at printing stations 58. The label material is kiss cut at a cutting station 60 to define the outline of the labels. This defines waste label material around the labels. The waste material is stripped from the web by a suction arrangement 64 having a suction pump 68 and a mouth 66 into which the waste material is drawn.
