Abstract (en)

[origin: EP1975314A2] The machine (1) has a former (2) with two rotating endless belts (5, 6), where a separating suction device is provided for the endless belts, and a sheet of fibrous materials is formed between the belts. A drainage installation (14) is arranged in a double belt zone (3), where the drainage installation includes a drainage foil, which is effective at both the endless belts. The drainage installation is connected upstream of the separating suction device.
