Abstract (en)
[origin: EP1975331A2] The system has partition wall elements (12), which are movable at a ceiling in a suspended manner. A fixing device is provided for fixing the walls to the ceiling in an extended condition, where the fixing device allows the partition element to move into a guide in or at the ceiling, in a retracted condition. A crank mechanism (22) with a detachably fixable crank (24) is provided for changing the condition of the fixing device. A latching apparatus (30) holds the crank on the crank mechanism as long as the fixing device is between the extended and retracted conditions. An independent claim is also included for a method for assembling the mobile partition wall with several partition elements.
