Abstract (en)

[origin: EP1975511A2] The control device (2) has a sensor (3) such as lambda probe or oxygen sensor for the determination of air ratio of a combustion gas. The sensor is arranged between a combustion chamber (4) and an exhaust gas outlet. The sensor is arranged in a flow area between a combustion chamber and an exhaust gas outlet through which the combustion gas flows in the direction of exhaust gas outlet. The sensor is arranged in a part of the flow area, in which the combustion gas is in a hot condition remains in active connection with the hot combustion gas for heat transfer.
