Abstract (en)

[origin: EP1975749A2] The timepiece has an elastic damping ring (7) retaining a movement (19) inside a case (1), and a manual control unit (22) traversing a wall i.e. middle wall (2) of the case and connected to the movement, where the unit is provided with a setting and winding rod (23). A rigid tube (25) traverses the wall and is integrated to the movement. The unit is engaged in the rigid tube. An elastic damping sleeve (26) serving as a sealing joint, is interposed between the rigid tube and the wall, where the tube is made of metal. The rigid tube is surrounded by the sleeve.
