Abstract (en)
The invention relates to an electromagnetic reflector, comprising a pair of opposite placed electric dipoles, wherein the dipoles are interconnected via a coplanar strip, forming a reflector module. Preferably, the electromagnetic reflector comprising a second reflector module, wherein the dipoles of the first and second reflector module have substantially the same orientation, wherein the coplanar strips of the respective reflector modules are substantially mutually parallel and wherein the electromagnetic reflector further comprises an additional coplanar strip interconnecting the coplanar strips of the respective reflector modules.
