Abstract (en)

[origin: DE102006003086B3] Sweeping machine has a housing (1) and a rotary brush (2), which is send from work position to withdrawal position. The impeller (3) is movable from work position to disengaging position whereby the impeller contacts and holds the rotary brush in the work position. The impeller is in outer contact with rotary brush in the disengaging position, so that the rotary brush is movable in the withdrawal position and is released for withdrawal.
