Abstract (en)

[origin: WO2007083142A1] The invention concerns a multi-dosing detergent delivery device that is removably insertable into an automatic dishwashing machine. The device comprises a cartridge capable of receiving therein a rack of dosage elements of a cleaning composition, a collection area formed in a lid area of said device suitable to collect water/wash liquor in a main wash cycle of a dishwasher and a directing means to direct water or wash liquor from said collection area selectively to an interior part of said device. In particular, the device of the present invention includes a sieve arrangement located in the lid area to prevent or impede particles from blocking water/wash liquor flow into said interior part of the device.
