Abstract (en)

[origin: WO2007083228A1] The present invention relates to a pharmaceutical product and to its use in the prevention and treatment of neurodegenerative diseases in humans. The method is based on the action of pantethine-derived substances which have demonstrated an up until now unsuspected effectiveness in protecting the integrity of the blood-brain barrier. By virtue of its method that can be generalized to many neurodegenerative diseases, the present invention significantly differentiates from the conventional therapeutic approaches which associate a treatment for each pathogenic origin.
