Abstract (en)

[origin: WO2007085232A1] The invention relates to a tissue, in particular a jeans tissue, comprising a basic tissue (140) and a tucked selvedge (135). The terminal sections (138) of the weft threads (137) are folded over at the edge (147) of the tissue and then resupplied into the tissue. The ends (139) of the terminal sections of the weft threads (138) can be dispersed over a zone a and become a visual bore. A field (144) having alphanumeric signs, logos or at least one colour is woven into the tucked selvedge (135). The field (144) serves for publicity purposes and renders the ends (139) of the terminal sections of the weft threads (138) largely or completely invisible by covering the ends (139) on the upper and inner side of the tissue according to weave technology or present the same colour as the warp threads (109 to 117) in the region of the field (144).
