Abstract (en)

[origin: WO2007080065A1] Commercial laundries are using up until now dryers (12) for the drying of wash, said dryers comprising a rotationally driven drum (16) with openings at opposite frontal faces. An opening serves to load and the other to unload the dryer (12), both openings being technically complicated. The aim of the invention is to provide dryers (12) for commercial laundries which can be loaded and unloaded from the same side, the loading and also the unloading process being carried out automatically. To this end, the same conveyor (13) is used in order to load and unload the respective dryer (12).
