Abstract (en)
[origin: WO2007082695A2] The invention relates to a method for computerised processing of source data elements (32-40, 46-54) of a source data set (20), comprising the steps: input at least one request element, in particular a search string, determine a weighted interconnection (42, 44, 60) of the request data element to at least one source data element (34, 38, 40) of the source data set (20), in particular with at least one hit string from the source data set (20) and output of the at least one source data element (34, 38, 40) corresponding to a weighting (w_{12} , w_{13} , w_{34}) for the weighted interconnection (42, 44, 60), preferably a hit probability for the request data element with the at least one source data element (34, 38, 40), wherein the weighting (w_{12} , w_{13} , w_{34}) for the weighted interconnection (42, 44, 60) is determined from at least one associative interconnection (42, 44, 60) and a further method a system and a computer programme product.
